Are investors rational? A behavioural perspective

With stock markets' bubbles increased in frequency for the past few decades, the traditional assumption on investor's rationality has been challenged by the rise of behavioural investing. In this course, we will demonstrate proven methodologies in exploiting the market inefficiencies to make above normal investment returns. Various finance theories will be covered to enhance the understanding on how market function. The rise of behavioural investment and the success of investment experts using publicly available information create a challenge to dismiss behavioural finance as an outlier phenomena. How could one equip themselves to avoid those behavioural investing mistakes?

LEARNING OUTCOMES

Upon completion of this course, participants will be able to:

- Identify the various behavioural investments' mistakes
- Discuss the pros and cons of rational and behavioural investing strategies
- Apply behavioural models to identify misprice stocks
- Analyse financial reports to make investment recommendation
- Evaluate investment opportunities to construct an investment portfolio
- Create an investment policy statement

METHODOLOGY

Harvard Business School's case study methodology, group discussion, powerpoint presentation and quote.

WHO SHOULD ATTEND

- CFO/ financial controllers
- Fund managers
- Remisiers
- CMSRL/ ERP holders
- Corporate financial advisors
- Research analysts
- Bankers
